[a] Owing to some unavoidable defects in the recording instrument, the velocity of the wind had to be omitted occasionally for a few days in several months and in several of the stations included in these summaries.
[b] 27 days of observation.
[c] 26 days of observation.
[d] No observation was made of wind direction on August 26, 27, 28, and 29.
[e] No observation was made of wind direction on February 2, 2 p. m.
[f] 28 days of observation.

BUNGALOW AND MAGNETIC BUILDINGS OF ANTIPOLO.

INTRODUCTION.

As a result of the inauguration in 1904 of an electric street railroad in Manila the magnetic observations made in the Observatory since 1890 had to be discontinued. Trials and experiments were prolonged for about a year but due to the great proximity of two lines to the magnetic building finally all hope of reliable data was given up and the instruments dismounted and stored away, awaiting for an opportunity to set them in some remote and safer location. Several places to build a new observatory were at different times considered but none possessed the required conditions. Baguio, Benguet, seemed desirable, but the uncertainty regarding the motive power of the future railway to the summer capital made fear a repetition of the Manila experience and the idea was abandoned. Later in 1909 the extension of the Manila Railroad eastern line to the mountain and town of Antipolo gave an opportunity to look in that region for a site within easy reach from the Central Office at Manila, by which the magnetic instruments are to be attended.

Location.—The town of Antipolo lies 18.5 kilometers east of Manila and about 215 meters above sea level, on one of the spurs of the eastern mountain range of Luzon Island. In the early months of 1910 a tract of land measuring 25,590 square meters was purchased by the Directors of the Manila Observatory to erect upon it the necessary buildings. Later a new portion was considered necessary and acquired in order to build a residential house conveniently separated from the Observatory structures. These Observatory grounds are located at about 1,000 meters north of the town and 520 meters from the railroad station, on the gentle slope of the mountain looking westwards. The geographical coördinates of the variation building are 121° 10′ E, 14° 36′ N. Clay is the predominating element of the soil, with occasional boulders of bassalt and diorite, but the amount of iron oxides is very small and so far no magnetic local disturbances have been observed. Comparisons with the old location of the Magnetic Observatory at Manila, due W of the new one, will show that the values of declination at Antipolo seem to be abnormally under those which would correspond to the general trend NW-SE of the isogonic lines in this part of the world. Such anomaly must be attributed to a remarkable deflexion toward the S of the isogonic lines along the east coast of Luzon where they tend to bay in order to follow the contour of that part of the island. Such a deflexion is responsible for a greater decrease of declination toward the E than toward the N.

Buildings.—The Variation Observatory is a stone building which measures 10 by 5 meters. Its location corresponds to the center of the property so as to prevent any influence from possible structures in the surrounding properties. Old volcanic tuff, or rather compressed mud, was used as stone material, quarried near Manila and profusely employed for building purposes; it contains only 1.87 per cent of feric oxides.

A thickness of 0.30 meter was considered favorable for the exterior walls in order to have an uniform inner temperature. The recording instruments room, 3 by 4 meters, is placed nearly in the center of the building so that its seclusion, from the exterior consists of the stone walls, two corridors about a meter wide, at the east and west sides, and two spaces in the N and S ends measuring about 5 by 2.6 meters; 0.025 board sheathing; air space 0.10 meters; 0.025 wooden sheathing; some layers of wall paper and paint, roofing maltoid paper. Beginning at the compressed cement tiles of the roof and going down: the attic, 2 meters high in the center and about 0.30 at the sides, provided with slat ventilators on the stone walls; bamboo fabric used as ceiling; 0.025 board sheating; cork dust; 0.025 board sheating; layers of wall paper and paint, roofing maltoid paper. In the southern free space or room opens the main door, while the northern serves as clock room, with one of its corners partitioned off as a dark room for photographic manipulations. Sufficient light is admitted to the rooms and corridors through small windows provided with shutters and slat ventilators.

As the mean annual variation of the temperature in this region seldom reaches 4° C., while the daily oscillation ranges between 9° C., during the rainy and winter season June to January, and 13° C. in the hot and dry months February to May, the described insulation was found practically sufficient to keep the daily range of temperature inside of the instruments room within a degree °C., and the annual variation within a couple of degrees.

For absolute observations a smaller structure was provided about 12 meters distant from the northwest corner of the variation building: it is a quadrangle of 3 by 2 meters made of the same tuff stone and roofed with cement tiles, but reënforced by a wood frame. It has a number of conveniently placed windows to admit light and to sight the marks and the polar star. Two marble piers were erected, the southern being used for the observations and the northern for tests; but ordinarily it serves as a desk, its wider top amply permitting such purpose. The geographic meridian was determined by a series of polar observations and has been repeatedly verified. As permanent azimuth mark a carved and white painted vertical line was provided on a rock or clift 1,800 meters distant, the azimuth of it being 7° 00′ 51″ W of S.

A dwelling and Office building of bungalow style was also constructed at a distance of 254 meters from the Observatory. Ample supply of water is obtained from a deep well and a windmill pumping tower placed in the remotest corner of the property.

INSTRUMENTS.

Variation Instruments.—Photographic records of the magnetic elements are obtained by the Mascart's magnetographs. The set comprises a declinometer or unifilar, a bifilar magnetometer, a magnetic balance and the recording apparatus. They are too well known to need any description; their location is such that the variations of the three are recorded on the same sheet of photographic paper, the beams of light being properly reflected by prisms so as to make them fall on the front of the recorder. The sliding of the chasis or the paper holder is regulated by a clock at the rate of a centimeter per hour.

Formerly the Observatory in the old site had two sets of instruments kept in operation, the one for the photographic records and a second for direct reading. In the new location good reasons have induced to dispense with the direct hourly reading set. It is only used occasionally, during eclipses and other similar purposes; to this end, extra marble piers were erected in each of the spaces left north and south of the variation room, being consequently easy to have in operation a complete set for direct reading.

INSTRUMENTAL CONSTANTS.

Unifilar.—As the magnet of the declinometer or D variometer is suspended by a nearly simple silk fiber from which the torsion is carefully removed, its effect is negligible: some experiments gave an average of 1.4′ for 90° of torsion. An angular value of 1.43′ corresponding to 1 mm on the magnetogram has been adopted and kept since the beginning of the records in the new site.

Bifilar or H variometer.—The scale value of this instrument is frequently determined by the ordinary method of comparing the deflexions of D and H produced by an auxiliary magnet. Owing to the relatively numerous earthquakes felt yearly in this country, which sometimes upset the magnets, an uniform value is nearly impossible, nevertheless care is taken to keep it around 0.00010 for each millimeter on the magnetogram; this value may be considered as adequate with the size of the magnet and conditions of the variometer.

Balance or Z variometer.—This is the most troublesome instrument of the set; the slightest jar being sufficient to change its adjustment: moreover there occur changes for which no apparent cause can be found. The scale value is also determined by the usual method of deflexions. Determinations are made not only every time there occurs any fairly strong earthquake, but also when during the absolute observations some abnormality is noticed. 0.00012 is the value selected as the lowest compatible with the small stability of this instrument.

TEMPERATURE COEFFICIENTS.

When the instruments were installed in the new Observatory it was considered reasonable to adopt the same temperature coeficients found and applied in the old site for the H and Z variometers.

The only reason urging for a new determination would have been the different conditions environing the instruments, but these did not really change, because each instrument was transferred with the same pillar and protecting cases, and placed at the same relative position and distance both from the walls and from the recording apparatus. Later on two verifications were made by heating the room from 26° C. to 30° C. by means of a brazier, and then allowing it to cool off, thus furnishing the artificial variation from which to determine the temperature coeficient. As the results did not differ sensibly from the coeficients in use, it was not considered wise to introduce any change: so the following are applied: H variometer, q=0.00071, Z variometer, q=0.00091.

ABSOLUTE OBSERVATIONS AND BASE-LINE VALUES.

To convert the photographic records into absolute values of D, H, and Z the ordinary method is followed. The millimeters and tenths of mm. are expressed respectively into minutes, and units of H, and Z and added to or subtracted from the base-line values. This is determined by absolute observations made ordinarily twice a month. Not less than three complete sets of observations, each comprising the determinations of D, H, and Z are used for the calculation of the base-line. As it is generally the experience in other Observatories some unexpected changes in the base-line cannot be accounted for, this is specially true for the H and Z. The declination base-line very seldom has had any not foreseen change, they are generally due to earthquakes, accidental jars and similar causes. In the H and Z base-lines besides the accidental changes dependent on the causes just indicated, some other changes also occur which in many occasions have to be assumed as continuous and uniform changes between two absolute observations and base-line determinations.

INSTRUMENTS FOR ABSOLUTE OBSERVATIONS.

The Observatory possesses two complete sets of magnetic instruments, each including a magnetometer for D and H determinations, and a dip circle for I. One of these sets is used for local observations and the other, more small and handy, for field work.

Declination and H force.—These observations are made with the Kew-pattern magnetometer, No. 28, by Elliott Bros. Although this instrument must be considered as very old and consequently has not some of the recent improvements introduced by the maker in the latter instruments, it is yet in a very good condition and gives fairly good results. During the year 1912 it was decided to secure a higher support for the deviating magnet to avoid the inconvenience of having the oscillations and deviations, necessary for the determination of the horizontal force, made at different levels, the instrument being so constructed that the oscillating magnet is placed in an upper detachable box which serves also for declination observations, while the smaller magnet for deviations has its place in the center of the magnetometer in a level few inches lower than that of the oscillating magnet. Such a difference of position of the two magnets can certainly introduce some error in the results of the H magnetic force, so the more recent instruments have been modified in order to have the oscillations and deviations made in the same place and under the same conditions. During the first year after the new support had been provided, oscillations and deflexions were repeated at each observation with the old and new arrangement to ascertain the amount of correction to be introduced on account of the level difference. It was constantly found that when both oscillations and deflexions were taken in the same upper box and with the same suspension, the H force resulted 0.00008 lower than when they had been taken according to the old method. This small amount being of the same sign of the discrepancies found by the comparison of our instruments with the standards of the Carnegie Institution Party, which visited our Observatory early in 1912, the new arrangement was permanently adopted for all the absolute observations of H.

The constants of this instrument are those sent with it by the Kew Observatory. But in order to reduce our observations more completely to the standard adopted by the Carnegie Institution the q for temperature corrections had to be calculated again. The old coeficient was calculated to reduce the observations to 0 °C. of the magnet while now they are reduced to 20 °C. With the new coeficient the H results are some 0.00005 lower; so this new correction also tends to diminish the discrepancies with the said standards.

Dip.—The instrument used is the Dover dip circle No. 7. Owing to the dampness of this region, it has been found nearly impossible to prevent the formation of rust in the axis of the needles, so the primitive needles which came with the instrument had to be discarded and from time to time new were secured from Casella and from Dover.

TEODOLITE MAGNETOMETER AND DIP-CIRCLE, BRUNNER.

This set of small instruments comprises: A teodolite magnetometer with the necessary arrangements for declination and magnetic horizontal force observations and a very small dip-circle, all constructed by Brunner of Paris. At present both instruments are out of use, due to rust and change of the constants of the small needles. It is expected that very soon they will be sent to the maker for a complete renewal. The methods of observations by these instruments may be seen in "El Magnetismo Terrestre en Filipinas," by Rev. R. Cirera, S. J., and "Annales du Bureau Centrale de Meteorologie de France, 1884," by Mr. Th. Moureaux.

COMPARISON OF INSTRUMENTS.

Owing to the location of our Archipelago in such out of way region there had not presented itself any opportunity since the year 1873, when they were acquired, to make a complete intercomparison of our instruments until 1912, when the Carnegie Institution included the Philippines in one of the magnetic cruises of its boat "The Carnegie."

In December of 1891 an English gunboat visited Manila and one of its officers made magnetic observations on the sea shore not far from our old Observatory. The results are not found in our records, but the then Director of the magnetic department, Rev. R. Cirera, S. J., states [1] that the values of D and I obtained by the said officer did not differ 0° 1′ from those obtained at our Observatory. The H could not be compared because the boat left before its calculation.

The nonmagnetic yacht "Carnegie" reached Manila on the first day of February, 1912, and comparisons were conducted at the Antipolo Magnetic Observatory from the 7th to the 29th under the direction of Dr. H. M. W. Edmonds, and by Messrs. H. F. Johnston and H. D. Frary. Below are the results which may be considered as fair if we pay attention to the want of comparisons and the long time, 15 years, the instruments remained in store before they were used in 1888. Moreover a new magnet was ordered and received from Dover shortly before the European war, but it has not been found satisfactory, and so as soon as possible it will be replaced.

WORK OF THE BUREAU DURING THE FISCAL YEAR ENDED JUNE 30, 1912.

WORK OF THE WEATHER BUREAU DURING THE FISCAL YEAR ENDED JUNE 30, 1912.

I. MANILA CENTRAL OBSERVATORY.

1. WORK OF THE CENTRAL OBSERVATORY.

(*a*) **Meteorological department.**—No radical changes have taken place. Though during the heated term advantage was taken of the privilege of reducing the number of office hours to five, it has been found expedient to keep even during that period one observer "on guard" from 6 a. m. to 7 p. m., at least on all working days, while during the preceding year the office closed at 6 p. m. during the hot season, as it does now on Sundays and legal holidays. The latter days excepted, one of the two telegraph operators is likewise on duty from 6 a. m. to 7 p. m., in order to receive the cable dispatches transmitted by a special line from the office of the Eastern Extension Company and to attend to the telephone. During the greater part of the year one of the unmarried employees has been given quarters at the Observatory on condition that he answers telephonic night calls. During the typhoon season this is of great importance; though usually a member of the staff will have to rise and reply, he can at least sleep tranquilly until called. The overtime given by the employees amounted to 1,475.5 hours, equivalent to 210.8 working days of 7 hours each.

On July 20, 1911, the engineer in charge of the irrigation works at San Miguel, Tarlac, was placed on the list of persons who are to receive typhoon warnings. The request of Insular Bureaus and Offices for meteorological data are constantly increasing in number. Unfortunately some of them were for information which is readily accessible in the publications of the Weather Bureau. In these cases the requisitioner has been referred to the latter, which are on file in practically every Bureau. Often requests are for data in a form in which they are not available, and much time had to be sacrificed in collecting them; but after all, this is one of the functions of the Weather Bureau.

The information exchanged with the other meteorological centers of the Far East—to wit, Tokyo, Zikawei, Taihoku, Hongkong, and Phulien—has been of the same nature and extent as in the preceding years, except that since July 1, 1911, immediate notice of the more important seismic disturbances is mailed to the neighboring seismological observatories in China, Japan, and likewise to Australia. Ever since Professor Doberck was succeeded by Mr. Figg in the directorship of Hongkong Observatory, the relations with the latter have been very satisfactory; but they have become excellent since Mr. Thomas F. Claxton has taken charge of meteorological affairs in the neighboring British colony. About the middle of November, 1911, the Weather Bureau was honored by a visit from Mr. Claxton, which was productive of great good. Up to that time, Japan, Formosa, and the Philippine Weather Bureau sent to their foreign correspondents the 6 a. m. and 2 p. m. observations: Indo-China, Hongkong, and Zikawei had different hours, those of Hongkong, for instance, being 10 a. m. and 4 p. m. A synoptic weather chart based on such material could at best be an approximation. The new director of Hongkong Observatory had no difficulty in adopting 6 a. m.

and 2 p. m. as the hours for cabling observations, and Indo-China and Shanghai fell into line with a commendable spirit of coöperation. It is true that, owing to the differences in longitude, the observations are even now not truly simultaneous, but the differences have been reduced to such limits as allow of constructing really serviceable weather maps.

The number of barometers compared was 203, a decrease of 28 compared with the preceding year. Most of these instruments were presented by dealers in order to obtain the certificate of the Observatory, which is given gratis.

Although, with the exception of July and September, 1911, the Philippines have been singularly free from typhoons, the frequency of these atmospheric disturbances within the field covered by the Manila forecasts has necessitated an unusually large number of typhoon warnings cabled to the foreign observatories, the total being 122, as against 94 during the preceding year, and 106 during the last but one. The greatest number (33) was reached in July, 1911; none at all were necessary during February and March, 1912.

(*b*) **Astronomical department.**—For the purpose of the time-signal service 520 transits of stars have been observed; while repeated observations of circumpolar stars served to check the constants of the instrument. Requests from several military posts necessitated the computation of the hours of the rising and setting of the sun and moon for every day of the year. The number of chronometers rated amounted to 29, as against 41 during the fiscal year 1911.

In addition to vessels of the United States Navy, also some Japanese men-of-war requested correct time to be sent by cable to Guam.

Since October, 1911, observations of solar radiation have been made by means of the Angstrom pyrheliometer on every day on which the sun was visible. But, though two to four observations were made on such occasions, the total is only 504. The work of reducing these observations is in progress, and the results will be published in due time.

(*c*) **Seismic department.**—No changes have been made in the instrumental equipment of the department, which may be said to be very complete.

It was stated last year that there had been an increase of 55.4 per cent in the frequency of perceptible earthquakes over the fiscal year 1910, during which latter the number of these disturbances had been exactly the average per year (121). During the fiscal year 1912 there has been a further increase, the number of earthquakes which have been reported as having been felt in various parts of the Archipelago having reached the high figure of 230, exceeding last year's total by 42. Compared with the yearly average, the excess is 90 per cent. Luckily, the intensity did not increase with the frequency; in only five cases was it greater than V of the Rossi-Forel scale. Two of these more severe quakes shook principally southeastern Luzon, while the remaining three had their epicenters in the valley of the Agusan River, eastern Mindanao, which latter region had likewise the lion's share of the year's total number of earthquakes, just as during he preceding year. The severest of these earthquakes, which has been registered all over the world with the characteristics of a "great earthquake," was the one of July 12, 1911. It caused great upheavals in the lake region of the Agusan Valley and on the eastern coast of northern Mindanao. Quite recently, on May 10, 1912, the northern part of the Agusan Valley has again been shaken by a very violent earthquake which, however, did not cause such changes as the preceding.

The Manila seismographs registered a total of 318 seismic disturbances, an increase of 21 over last year. Of these, 207 had their origin within an area with a radius of 1,000 kilometers from Manila, and hence, within the Archipelago or the adjacent seas

(these include many of the earthquakes already mentioned as perceptible); 97 proceeded from centers more than 1,000 but less than 5,000 kilometers from Manila, which zone comprises the highly seismic regions of Japan, Formosa, the Celebes Sea, New Guinea, and the Dutch possessions in the south; within the zone 5,000 to 10,000 kilometers originated 10, corresponding mostly to earthquakes felt in Turkestan, in central Siberia, and in the neighborhood of the Kurile Islands; of earthquakes with epicenters at distances greater than 10,000 kilometers only 4 have been recorded by our instruments: one of these is known to have occurred in Alaska, another in Mexico, the third in Iceland, and the fourth in the southern part of the Atlantic Ocean.

The Baguio seismographs continued in good agreement with those of the Central Observatory, the only difference being in cases of disturbances of almost purely local character.

Aside from the list of earthquakes and microseismic movements, which regularly appear in the seismological section of the Monthly Bulletin, and "The Eruption of Taal Volcano" which will be mentioned in the chapter on publications, the following special papers have been published in the Bulletin by the Rev. Miguel Saderra Masó, Assistant Director of the Weather Bureau: "The Earthquake of the Agusan Valley and the Eastern Coast of Mindanao" (Bulletin for July, 1911); "Volcanic Eruptions in the Philippines in Relation to Earthquakes and Subterranean Noises, to Rainfall, and Atmospheric Pressure" (Ib.); "Seismotectonic Lines in Southern Luzon" (Bulletin for November, 1911). The Bulletin for December, 1911, contains likewise the continuation of the abbreviated earthquake catalogue, commenced for the year 1908.

Beginning with the Bulletin for January, 1912, Greenwich mean time has been used throughout the seismological bulletin in order to conform with the practice of foreign observatories and with the requirements of repeated circulars of the International Seismological Commission. Insular time is, however, added in brackets, for the convenience of the Philippine readers.

The advance seismological report, has been very well received by our correspondents, since it contributes to an earlier determination of the epicenters of submarine earthquakes. Some 70 copies prepared by the Roneo process are being sent out, in return for which we receive similar reports from 8 observatories in the Far East and Australia, 10 in the United States and Canada, and 24 in Europe. Since January, 1912, this report has been brought into strict conformity with international usage, by adopting the nomenclature established by the International Seismological Commission at the Congress in Manchester, 1911.

In addition to the advance report just mentioned, immediate information on more important seismic disturbances is exchanged by postal cards with the neighboring observatories of Zikawei, Tsingtau, Chemulpo, Osaka, and Perth. In a few exceptional cases photographic copies of seismograms have been furnished upon request.

(*d*) **Magnetic department.**—The routine work, consisting in continuous photographic recording of the variations in the three magnetic elements and in frequent absolute observations for the purpose of establishing the reference lines of the photographic curves, has been carried on without a hitch. Special observations were made during the annular eclipse of the sun on October 22, 1911 (visible in Manila as partial), and the annular eclipse on April 16–17, 1912 (invisible here), in both instances according to the program of the International Commission.

The work of deducing the hourly values of the magnetic elements from the photographic records and of tabulating them is in preparation. The task itself could not yet be commenced, since we are not yet in possession of the final results of the standardization tests made by the staff of the magnetic survey yacht *Carnegie*. There have, however, been published in "Terrestrial Magnetism and Atmospheric Electricity" the

absolute measurements made during the calendar year 1910, and trimonthly lists giving the magnetic state for every day of the quarter, have been forwarded the International Commission for publication in its bulletin, as is done by other magnetic observatories.

The visit of the "Carnegie."—In order to make arrangements, Dr. L. A. Bauer, director of the department of terrestrial magnetism of the Carnegie Institution of Washington, arrived in Manila about the beginning of December, 1911. Though his stay was necessarily limited to twenty-four hours, he found time to visit our magnetic observatory at Antipolo, which he considered to be an excellent site for the headquarters of the expedition and designated it as such. In the beginning of February, 1912, the *Carnegie* finally arrived in Manila Bay. The ship's magnetic instruments as well as the terrestrial standards were immediately transferred to Antipolo and preparations made for an extended series of observations which were to serve for the testing of the *Carnegie's* own instruments for use at sea, of the absolute instruments of the observatory, and of those of the Bureau of Coast and Geodetic Survey. These observations lasted from February 7 to 29, and were made under the direction of Dr. H. M. W. Edmonds by Messrs. H. F. Johnston and H. D. Frary, on the part of the Carnegie expedition, and Mr. C. Dulueña, representing the Weather Bureau. Dr. W. J. Peters the commanding officer of the expedition, likewise made a series of comparisons with his marine apparatus. All the observations have been sent to the Carnegie Institution of Washington for computation. Though, as stated, the final results have not yet been received, the visiting scientists found the instruments of the magnetic observatory in excellent condition, which is somewhat remarkable in view of the fact that the magnets have never been changed since they have been purchased, twenty-four years ago, during five of which the entire equipment had been stored away, the Manila Magnetic Observatory having been ruined in 1905 by the advent of electric street cars. Nevertheless, additional magnets have been ordered as a precaution against accidents, and the purchase of several new instruments of the latest types is contemplated, since it is desired to bring the observatory fully into accord with the somewhat exacting desires of the International Commission.

2. IMPROVEMENTS.

(*a*) The general office had for many years been altogether too crowded to be comfortable. Hence, it was decided to transfer part of the office force to the large hall forming the upper story of the former magnetic building. As the latter has windows on all sides and is to a great extent sheltered by trees, this additional office space is much cooler than the general office in the main building. It was occupied about the middle of November, 1911. The ground floor of the same building offers a convenient place for eating to those employees who have their noonday meal brought to the Observatory. The improvement involved no expense to the Government, except 6 tables, the installation of electric fans, and an additional water cooler, with their running expenses.

(*b*) The Observatory has purchased a combined barograph and thermograph of aluminium for meteorological observation by means of kites. One kite has been bought in France, another constructed by our mechanics.

(*c*) An important improvement at the Antipolo Magnetic Observatory consisted in the boring of an artesian well, the erection of a windmill with pump and storage tank, and the laying of the necessary piping for conducting the water to the observatory. The well is on the boundary line between our property and a tract owned by the Bank of the Philippines, which latter bore part of the expenses of sinking the well, as it furnishes water for both properties. The Government incurred no expense on account of the improvement. Running water is, of course, a great convenience, if not necessity, in the photographic dark room connected with the recording apparatus.

II. SECONDARY STATIONS.

1. CHANGES IN STATIONS.

No changes either in number, or location, or class of stations have taken place during this fiscal year.

2. STATIONS OF THE WEATHER BUREAU.

Hence, on June 30, 1912, the Weather Bureau maintained the following stations:

One branch observatory at Baguio, 1 magnetic observatory at Antipolo, 7 first-class stations, 10 second-class, 25 third-class, and 9 rain stations. Two of the third-class stations were temporarily without observers, both in Mindanao (Cagayan de Misamis and Jolo).

Volunteer stations.—Of the volunteer stations, in general, the same could be repeated what was said last year. For this reason several applications for the loan of instruments have been denied. A set of thermometers and a rain gauge have, however, been furnished to the city engineer of Manila for the use at Boso-Boso (watershed of the Manila water supply).

A similar set has been sent to Reverend Father Salvator, O. M. Cap., missionary on Palau, Western Carolines, who has his own barometer and barograph, and for a long time had been sending such observations as he could make. Mr. Bona, a merchant at Cervantes, bought his own instruments and began to send observations in May, 1912.

3. SUBSTITUTES FOR ABSENT OBSERVERS.

As several of our first and second-class observers had already lost some of their accrued leave of absence by reason of the five-year limit, a greater number than usually applied for leave. Whenever this extended over a long period, a substitute was sent, while short absences of first-class observers with reliable assistants were bridged over by placing the assistant in charge of the station with the salary of a third-class observer. The system of sending substitutes has proved very satisfactory, since it not only prevents interruptions in the observations, but likewise serves the purpose of inspection.

III. CHANGES IN THE PERSONNEL.

The number of separations from the service was identical with that during the preceding year, 17. As there were only 16 appointments, and one of these of a substitute for an absent observer, the personnel of the Weather Bureau has, temporarily, decreased by two, consisting on June 30, 1912, of 1 Director, 3 Assistant Directors, 1 secretary, and 89 employees.

1. **Separations.**—The employees who left the meteorological service were: One assistant calculator and 1 mechanic, both temporary employees at ₱30 per month each; 6 third-class observers; 2 messengers; 5 assistants at first-class stations; and 2 rain observers—none above the grade of semiskilled laborer. As to the method of separation: There were 10 resignations, of which, however, 1 was tendered upon request; 5 employees were separated by discharge; and 2 by dismissal. Five of the men who left had been appointed during the fiscal year.

2. **Appointments.**—The vacancies created by separation have been filled partly by promotions and reinstatement, the rest by the following appointments: One assistant calculator at ₱30 per month and 1 mechanic at ₱30 per month, both temporary employees; 4 third-class observers; 2 messengers; 6 assistants to first-class observers; and 2 rain observers.

3. **Reinstatements.**—Two third-class observers requested and obtained reinstatement.

4. **Promotions.**—There were in all 10 promotions, 2 of which were of temporary character for periods less than two months. One assistant calculator was promoted from ₱600 per annum to ₱720; 2 temporary assistant calculators from ₱25 per month to ₱35; 1 temporary assistant calculator at ₱25 per month to second-class observer (₱600 per year); 2 telegraph operators from ₱60 per month to ₱70; 1 third-class observer from ₱360 per annum to ₱480 (Yap); finally, 2 assistants at first-class stations and 1 rain observer to the position of third-class observers.

5. **Reductions.**—One second-class observer at ₱720 per annum requested transfer to the Central Observatory, being willing to accept temporary appointment. While his salary remains the same, the change really amounts to a reduction, as he has no claim to leave of absence while holding a temporary position. One third-class observer, having returned from the station on Yap, Western Carolines, has been reduced from the exceptional salary of ₱480 attached to that station, to ₱360 per year, the ordinary pay of his class.

IV. PUBLICATION.

Special publication.—In connection with the Taal disaster, the Rev. Miguel Saderra Masó, S. J., Assistant Director of the Weather Bureau, published a special report: "The Eruption of Taal Volcano, January 30, 1911." (English and Spanish, 45 pages and 7 plates.)

V. MISCELLANEA.

1. WIDER APPLICATION OF THE BAROCYCLONOMETER.

In March, 1912, the Director of the Weather Bureau received a communication from the Bureau of Navigation, Navy Department, Washington, inquiring what modifications might be necessary in order to adopt his barocyclonometer for use in the Atlantic Ocean. At the same time prices and name of constructor were desired. As the problem of modifications was not so very simple, Father Algué, while on leave of absence, devoted much time to consulting the records of Belen Observatory, Havana, whence, he proceeded to Washington to talk the matter over with the officials of the Navy Department. He endeavored likewise to make arrangements with an English firm of known reliability to have the instrument made at a lower price than that charged by the present constructor.

2. THE SEISMOLOGICAL STATION AT AMBULONG.

On February 1, 1912, the Philippine Legislature passed Act No. 2115, entitled: "An Act for the protection and assistance of persons living in the vicinity of Taal Volcano," directing that a seismological station be established by the Weather Bureau near the Taal Volcano and appropriating the sum of ₱18,000 for the purpose. The site chosen is in the barrio of Ambulong, municipality of Tanauan, Batangas, on the shore of Lake Bombon, some 10.3 kilometers from the center of the crater.

PART II.

HOURLY METEOROLOGICAL OBSERVATIONS MADE AT THE CENTRAL OBSERVATORY DURING THE CALENDAR YEAR 1912.

INTRODUCTION.

Part II of our report for 1912 contains the meteorological observations made during the year at the Central Observatory at Manila. The hours of observations are given in Insular standard time—that is, in the time of the one hundred and twentieth meridian east of Greenwich, adopted by order of the United States Government on September 6, 1899. It is to be noted that the observations of atmospheric pressure, temperature, relative humidity, vapor tension, and the direction and force of the wind are hourly, read directly between the hours 6 a. m. and 7 p. m., while for the hours from 8 p. m. to 5 a. m. they are taken from self-registering apparatus. The hourly observations of the direction, form, and amount of clouds are made from 7 a. m. until 6 p. m. only. Each of the tables of hourly observations shows also the respective hourly, daily, and monthly means. The extreme daily values of the various elements, together with the time of their occurrence, are united into a separate table. The thermometers and atmidometer are placed in the observatory park, 1.5 meters above the ground.

The readings of the barometer have not been corrected for gravity; this correction would be —1.72 mm.

All observations contained in this report are expressed in the metric system, continuing the practice adopted at the time of the reorganization of the Weather Bureau. As in former reports, we have arranged the observations according to month.

EXPLANATION OF SYMBOLS (BEAUFORT'S LETTERS AND INTERNATIONAL WEATHER SYMBOLS).

Symbol.	Equal to—	Symbol.	Equal to—
Ci.	Cirrus.	o	Overcast.
Ci.-S.	Cirro-stratus.	p	Passing showers of rain.
Ci.-Cu.	Cirro-cumulus.	q	Squally.
A.-Cu.	Alto-cumulus.	u	Ugly or threatening weather.
A.-S.	Alto-stratus.	v	Visibility of distant objects.
S.-Cu.	Stratus-cumulus.	w	Wet or heavy dew.
N.	Nimbus.	●	Rain.
Cu.	Cumulus.	≡	Fog or mist.
Cu.-N.	Cumulo-nimbus.	d	Dew.
S.	Stratus.	⊕	Solar corona.
Fr.-Cu.	Fracto-cumulus.	○	Solar halo.
Fr.-N.	Fracto-nimbus.	⊖	Lunar corona.
Fr.-S.	Fracto-stratus.	∈	Lunar halo.
S.-cf.	Stratus-cumuliformis.	↘	Lightning.
N.-cf.	Nimbus-cumuliformis.	↘	Thunderstorm.
M.-Cu.	Mammato-cumulus.	⊣	Thunder.
b	Clear, blue sky.	↙	Strong wind.
c	Partial clouds.	⌒	Rainbow.
d	Drizzling or light rain.	∞	Dust haze.
g	Gloomy, or dark, stormy-looking weather.		

NOTE.—The intensity of any individual phenomenon may be distinguished by the figures of ° and ², which should be used as exponents of the symbols, so that ° indicates slight, and ² strong; e. g., ●°=slight rain, ●²=heavy rain. Figures in heavier type represent extreme values.

DAILY GENERAL REMARKS.

1____Cloudy weather.
2____As yesterday.
3____Coloration of clouds at sunset.
4____d in the forenoon; ●° in the afternoon and night.
5____d in the early morning.
6____Fair weather.
7____d° at noon.
8____d° in the morning; somewhat gusty ESE winds in the forenoon and afternoon.
9____☊ early in the morning; coloration of upper clouds at sunset.
10____● in the afternoon; slight coloration of upper clouds at sunset.
11____Overcast.
12____●° in the forenoon and afternoon.
13____●° in the early morning and afternoon.
14____Cloudy weather.
15____As yesterday.
16____Do.
17____Do.
18____Gusty ESE winds in the afternoon.
19____Cloudy weather.
20____☊ early in the morning.
21____Gusty SE winds in the afternoon.
22____Cloudy weather.
23____Fair weather.
24____As yesterday.
25____Cloudy weather.
26____As yesterday.
27____d° in the afternoon.
28____◠ 7.45a.; d° in the morning and afternoon; coloration of clouds at sunset.
29____Fair weather.
30____Overcast.
31____Do.

DAILY GENERAL REMARKS.

1____☌ early in the morning.
2____Gusty N winds at night.
3____d° in the morning.
4____● in the afternoon.
5____● in the forenoon and afternoon.
6____p° 11.40 a.; ● in the afternoon.
7____d° in the forenoon; ● in the afternoon.
8____d° 11.10 a. and 12.25 p.
9____Convergence of Ci. toward NNW, and somewhat gusty SSE winds in the afternoon.
10____☌ early in the morning; somewhat gusty SSE winds in the afternoon.
11____Fair weather.
12____Do.
13____Cloudy weather.
14____Coloration of upper clouds at sunset.
15____Gusty SE winds in the afternoon.
16____●, ◹° NE quadrant in the afternoon; convergence of Ci. toward S at sunset.
17____Cloudy weather.
18____●° 11.45 a.
19____Cloudy weather.
20____Gusty Ely winds in the afternoon.
21____d° in the morning and afternoon.
22____Fair weather.
23____Cloudy weather.
24____d° in the forenoon.
25____Belts of Ci. extended from N to S in the morning and afternoon; gusty SEly winds in the afternoon.
26____Somewhat gusty SEly winds in the forenoon and afternoon.
27____Light convergence of Ci. toward S in the morning; somewhat gusty ESE winds in the forenoon and afternoon.
28____Somewhat gusty SSE winds in the afternoon.
29____Somewhat gusty SEly winds in the afternoon.

DAILY GENERAL REMARKS.

1____d, gusty ESE winds in the afternoon.
2____Somewhat gusty SE winds in the afternoon.
3____d° in the morning.
4____Overcast.
5____Coloration of upper clouds at sunrise.
6____Gusty SEly winds in the afternoon.
7____Somewhat gusty SE winds in the afternoon.
8____Gusty SEly winds in the afternoon.
9____Somewhat gusty SE winds in the afternoon.
10____Gusty SE winds in the afternoon.
11____Fair weather.
12____Somewhat gusty W winds in the afternoon.
13____Fair weather.
14____Cloudy weather.
15____Overcast.
16____●, somewhat gusty SE winds in the afternoon.
17____○° in the morning; gusty SEly winds in the afternoon.
18____d° in the afternoon.
19____Coloration of clouds at sunset.
20____Gusty SEly winds in the afternoon; coloration of clouds at sunset.
21____Cloudy weather.
22____Somewhat gusty SE winds in the morning and afternoon; coloration of upper clouds at sunset.
23____d° in the morning; somewhat gusty ESE winds in the afternoon.
24____d° in the morning.
25____Gusty SE winds in the forenoon and afternoon.
26____As yesterday.
27____Somewhat gusty SEly winds in the afternoon.
28____Gusty SEly winds in the afternoon.
29____As yesterday.
30____≡° early in the morning.
31____≡° early in the morning; somewhat gusty SE winds in the afternoon.

OBSERVATIONS FOR APRIL, 1912.

ATMOSPHERIC PRESSURE, 700mm+.

DAILY GENERAL REMARKS.

1____≡ early in the morning; somewhat gusty SEly winds in the afternoon.
2____Somewhat gusty SE winds in the afternoon.
3____Gusty SE winds in the afternoon; coloration of clouds at sunset.
4____d° somewhat gusty E winds in the morning.
5____Fair weather.
6____Somewhat gusty SE winds in the afternoon.
7____Cloudy weather.
8____≡ early in the morning; somewhat gusty SEly winds in the afternoon.
9____Convergence of Ci. toward N in the afternoon.
10____Cirrus extended from SSE to NNW in the morning.
11____Cloudy weather.
12____≡° early in the morning.
13____◠, ●°, gusty ESE winds in the morning.
14____Gusty SEly winds in the forenoon and afternoon.
15____d° in the morning; somewhat gusty ESE winds at noon.
16____Gusty SEly winds in the afternoon.
17____d° in the forenoon and afternoon.
18____≡° early in the morning; somewhat gusty SEly winds in the afternoon.
19____Somewhat gusty SEly winds in the forenoon and afternoon.
20____Somewhat gusty Ely winds in the afternoon.
21____Gusty SEly winds in the forenoon and afternoon.
22____≡ early in the morning; somewhat gusty ESE winds in the afternoon.
23____Gusty SEly winds in the morning and afternoon.
24____Gusty SEly winds in the afternoon and evening.
25____Gusty SEly winds in the morning and afternoon.
26____Fair weather.
27____Somewhat gusty SE winds in the afternoon.
28____As yesterday.
29____Do.
30____Cloudy weather.

DAILY GENERAL REMARKS.

1____Somewhat gusty SEly winds in the afternoon.
2____As yesterday.
3____Do.
4____Fair weather.
5____Cloudy weather.
6____◠ in the morning; somewhat gusty SWly winds in the afternoon.
7____Somewhat gusty Wly winds in the afternoon.
8____d in the early morning; gusty WSW winds at noon; ⊤ SE in the afternoon.
9____◹ NE quadrant in the afternoon.
10____Somewhat gusty ESE winds in the afternoon.
11____Cloudy weather.
12____Fair weather.
13____Somewhat gusty WSW winds in the afternoon.
14____As yesterday.
15____Cloudy weather.
16____Gusty WSW winds in the afternoon.
17____Fair weather.
18____⊤ NE 3.15p.
19____Somewhat gusty SEly winds in the afternoon.
20____⊤ E in the afternoon.
21____⊤ ENE, S in the morning; ◹ NE, d° in the afternoon; ● at night.
22____● in the early morning.
23____◹ NE quadrant in the afternoon.
24____⊤ NE quadrant, d° in the afternoon.
25____d°, ◹ NE quadrant in the afternoon; ● at night.
26____⊤ E 12.15p.; ◹ SW 6.45p.
27____◹ NE quadrant in the afternoon.
28____Local thundershowers, came from the NE quadrant in the afternoon.
29____◹ SW and NE quadrants in the afternoon.
30____◹ S quadrant in the afternoon.
31____⊤ SE, ◹ ENE in the afternoon.

OBSERVATIONS FOR JUNE, 1912.

ATMOSPHERIC PRESSURE, 700mm+.

DAILY GENERAL REMARKS.

1---- E, d in the evening; ●° at night.
2---- ●, various points in the evening.
3---- ● in the afternoon and night; various points in the evening.
4---- d, coloration of clouds early in the morning; $\frown^2$, local ^{2}, ● in the evening.
5---- d, p°, E, NE in the afternoon; $\frown$, SE in the evening.
6---- ⊤° SSE, N, ● in the evening.
7---- ⊤ NE, S and W, local thundershowers in the afternoon; ● at night.
8---- ●, ° NE quadrant in the afternoon; ●° at night.
9---- d° in the early morning and afternoon.
10---- ○ in the morning; various points in the afternoon.
11---- Overcast.
12---- NE quadrant, NNW in the evening.
13---- SE quadrant, $\frown$, ● in the afternoon.
14---- NE quadrant in the afternoon.
15---- N in the evening.
16---- Convergence of Cirrus toward W early in the morning; N quadrant, ● in the afternoon.
17---- d° in the afternoon; ●° at night.
18---- Frequent d or ● especially in the early morning.
19---- d in the morning; ⊤ NE quadrant in the afternoon; ⊤ SE quadrant in the evening; ● at night.
20---- Convergence of Cirrus toward NNE in the morning; ⊕ in the afternoon; ● in the afternoon and night.
21---- Rainy weather with some gusty SW winds of 20 meters per second in the afternoon.
22---- Somewhat rainy weather with some gusty SWly winds in the afternoon and evening.
23---- Gusty SWly winds in the afternoon; ● in the afternoon and at night.
24---- Gusty SWly winds in the forenoon and afternoon; ● at night.
25---- ●°, convergence of Cirrus toward NNE in the morning; d° in the afternoon.
26---- S quadrant in the evening.
27---- ● in the afternoon and at night.
28---- ● in the morning and evening.
29---- Rainy weather, especially in the evening with gusty SWly winds.
30---- As yesterday.
31---- NW quadrant in the morning; rainy weather, especially in the afternoon with gusty SWly winds.

OBSERVATIONS FOR AUGUST, 1912.

DAILY GENERAL REMARKS.

1---Squally and rainy weather; ⌈ᐸ² E, ⊤ different points in the morning, ⊤ W in the afternoon.
2---● in the morning and afternoon with somewhat gusty SWly winds.
3---p° in the morning; ● at night.
4---d in the early morning.
5---Gusty WSW winds in the afternoon; ᐸ N quadrant, ●² in the evening.
6---Somewhat gusty WSW winds in the afternoon.
7---⌈ᐸ° SE quadrant, d° in the afternoon; ●, ᐸ different points at night.
8---⌈ᐸ° NE quadrant in the evening; d at night.
9---p° in the morning, ⌈ᐸ° NE and SE quadrants; ● in the afternoon; ᐸ various points, ●² at night.
10---● in the morning, ●² at night.
11---● in the early morning, afternoon and night; ⊕, gusty WSW winds in the afternoon.
12---● in the morning and at night; d° in the afternoon; ᐸ NE in the evening.
13---● in the morning; d in the afternoon.
14---d in the early morning; ● at night.
15---● in the early morning and at night.
16---○, slight convergence of cirrus toward NE at noon; d° in the evening.
17---d in the early morning; gusty SWly winds in the afternoon.
18---d in the morning.
19---● in the early morning; ◠ in the evening.
20---◠, ● in the morning; somewhat gusty SWly winds in the afternoon, ⊤° NW, ᐸ different points in the evening.
21---●² in the morning.
22---● early in the morning; somewhat gusty SWly winds in the afternoon.
23---As yesterday.
24---● in the early morning; d° in the morning and afternoon; somewhat gusty SWly winds at intervals.
25---● in the morning and at night; d in the afternoon; gusty SWly winds at intervals.
26---Somewhat rainy and squally weather.
27---As yesterday.
28---Do.
29---Do.
30---Do.
31---⊤ NE quadrant, and WNW in the morning; somewhat rainy and squally weather.

DAILY GENERAL REMARKS.

1____Rainy weather, especially in the morning, with gusty WSW winds in the afternoon.
2____d° in the forenoon; ● in the afternoon and at night.
3____●° in the morning and at night; d° in the afternoon.
4____●° in the morning, gusty Sly winds in the morning and afternoon.
5____⌈⌊° various points in the evening.
6____Light convergence of Cirrus toward ESE at noon; coloration of clouds, d° ⌈⌊° NE quadrant, ⌊ NW quadrant in the evening.
7____⌈⌊° SW quadrant, ⌈⌊² E quadrant, ● in the afternoon; ⌊ N quadrant in the evening; ●² at night.
8____● in the morning and afternoon; gusty NNW winds in the afternoon.
9____d° in the morning; gusty SWly winds in the afternoon; ⌊ different points in the evening.
10____Somewhat gusty winds in the morning and afternoon; ⌊ N quadrant in the evening.
11____d° in the morning; gusty SWly winds in the afternoon; ⌊ N quadrant in the evening.
12____d in the early morning and afternoon; gusty winds in the forenoon.
13____Somewhat gusty SW winds in the afternoon; coloration of upper clouds at sunset.
14____● in the morning; coloration of clouds at sunset.
15____d° in the afternoon; gusty SWly winds in the afternoon and at night.
16____Gusty SWly winds at intervals; ● 11.50 a., 2.10 p.
17____Some ● or d° with gusty SWly winds during the day.
18____● in the morning; coloration of upper clouds at sunset.
19____Gusty SWly winds in the evening.
20____Gusty SWly winds and coloration of upper clouds in the evening.
21____Somewhat gusty WSW winds at intervals.
22____Light convergence of Cirrus toward ESE in the morning; ○ in the forenoon and afternoon; ⌊° N in the evening.
23____Light convergence of Cirrus toward ESE in the morning, and toward E in the afternoon; ⌈⌊ NE quadrant, coloration of upper clouds and heavy thundershowers in the evening.
24____d° in the morning and afternoon.
25____●, ⌈⌊° S quadrant in the evening.
26____⌈⌊ E, N in the afternoon; near ⌈⌊, ⌊ NE in the evening.
27____Gusty SWly winds at intervals with ● in the morning and afternoon; ⊤° W 2.25 p.
28____Gusty SWly winds at intervals; d° 6 a.
29____Gusty SWly winds at intervals; ● in the morning; d in the afternoon and at night.
30____Somewhat rainy and squally weather.

DAILY GENERAL REMARKS.

1____● in the morning; d° in the afternoon.
2____●° in the early morning.
3____☌, p° in the morning; coloration of clouds at sunset.
4____●, ◠ in the morning; ◟ N in the evening; d at night.
5____d in the morning and afternoon; ◸ NE 1.40 p.; ◟ N in the evening.
6____d in the morning; ⊤ SSE, NNE, p° in the afternoon.
7____☌ early in the morning; ⊤ SE quadrant in the afternoon; ◟ N in the evening; heavy thundershowers at night.
8____● in the early morning; d at noon.
9____● in the morning; somewhat gusty WSW winds in the afternoon; d at night.
10____◠, ● in the morning; somewhat gusty W winds in the afternoon.
11____☌ early in the morning; ● in the afternoon; somewhat gusty SEly winds in the forenoon, veering to SW in the afternoon.
12____◸ E in the afternoon.
13____⊤° SW in the afternoon; ● at night.
14____● in the morning; d° in the afternoon; ◟ N in the evening.
15____Convergence of Cirrus toward S in the morning; gusty NNE winds at intervals in the afternoon.
16____●° in the morning and afternoon with gusty Nly winds at intervals.
17____As yesterday.
18____☌ early in the morning.
19____● in the morning and afternoon.
20____d, ◠ in the morning.
21____● in the afternoon.
22____● in the morning; d° 1.45 p.; ◟ NW in the evening.
23____☌ early in the morning; ●° in the forenoon and afternoon; ◟ NW in the evening.
24____☌ early in the morning; ●², ◸ W in the afternoon; ◟ N, W in the evening.
25____☌² early in the morning; p° in the afternoon; ◠², coloration of clouds at sunset.
26____☌ early in the morning; gusty WSW winds in the afternoon and at night; coloration of upper clouds at sunset.
27____●, ◠ in the early morning; gusty Sly winds in the morning.
28____Heavy thundershowers in the evening.
29____◸° NE 2.55 p.; ◟ NW in the evening.
30____d° 10a.; ●, ⊤ S in the afternoon.
31____●° in the forenoon and afternoon; ◸° SE, ◟ N in the evening.

DAILY GENERAL REMARKS.

1____◟ NW quadrant in the evening.
2____●° at noon.
3____Somewhat fresh SEly winds in the forenoon and afternoon.
4____Near ⊤ NNW, ●° in the afternoon; ◟ NW quadrant in the evening.
5____☌ early in the morning; coloration of clouds at sunset.
6____Gusty Nly winds in the morning and afternoon; near ⊤ in the afternoon; ● in the afternoon and at night.
7____● in the morning; ◸ E at noon; ●° in the afternoon.
8____Coloration of clouds at sunset; d, ⊤ E in the evening.
9____p° 12.50 p.
10____Fair weather.
11____●° in the afternoon.
12____● 12.10 p.
13____Cloudy weather.
14____⊤ NE, NW, ● in the afternoon.
15____●° in the afternoon; coloration and convergence of Cirrus toward ENE at sunset.
16____Cloudy weather.
17____● in the afternoon.
18____☌° early in the morning; ⊤° ENE, d° in the afternoon.
19____☌° early in the morning.
20____● at night.
21____Overcast.
22____Cloudy weather.
23____ Do.
24____Coloration of upper clouds at sunset.
25____Somewhat gusty Nly winds at intervals; ●°, ⊤° S in the afternoon.
26____Coloration of upper clouds at sunrise.
27____○°, convergence of Cirrus toward SE in the morning.
28____●° in the morning and at night.
29____Rainy weather, especially early in the morning.
30____d in the morning; ● in the afternoon and evening.

OBSERVATIONS FOR DECEMBER, 1912.

ATMOSPHERIC PRESSURE, 700mm+.

DAILY GENERAL REMARKS.

1____Somewhat gusty SE winds in the forenoon and afternoon.
2____Cloudy weather.
3____◠° in the afternoon; coloration and convergence of Cirrus toward SE at sunset.
4____Overcast.
5____♌, convergence of Cirrus in the morning; coloration of upper clouds at sunset.
6____Cloudy weather.
7____Do.
8____Somewhat gusty NNE winds in the forenoon and afternoon.
9____Overcast.
10____d° in the morning; somewhat gusty NE winds in the afternoon.
11____d° 11.23a.; ●° in the afternoon and at night.
12____Cloudy weather.
13____Do.
14____Do.
15____d° in the afternoon.
16____Cloudy weather.
17____d° in the afternoon.
18____Cloudy weather.
19____Coloration of clouds at sunrise.
20____Cloudy weather.
21____Do.
22____d° 11.10a. and 2.35p.
23____Cloudy weather.
24____Somewhat gusty Nly winds in the forenoon and afternoon; ⊤° SE, ●° in the afternoon.
25____●° in the early morning; d° in the afternoon.
26____● in the early morning and afternoon.
27____Somewhat gusty Ely winds in the afternoon.
28____Cloudy weather.
29____●° in the afternoon.
30____d° in the morning; ●° in the afternoon.
31____d° in the morning; ● in the afternoon.

GENERAL SUMMARY FOR 1912.

MONTHLY AND YEARLY RESULTS OF METEOROLOGICAL OBSERVATIONS FOR 1912 AND COMPARISONS WITH THEIR NORMAL VALUES.

Atmospheric pressure.

Annual summaries for first and second class stations 1912	313

INTRODUCTION.

In this volume (Part III) of the report of the Weather Bureau for 1912 we publish the meteorological observations made in the various stations which at present constitute the meteorological service of the Philippines, a service established by Act No. 131 of the Philippine Commission May 22, 1901.

In Part II of the report for 1902, pages 52 to 60, will be found a detailed account of the establishment and organization of these branch stations and a list of the instruments with which they are equipped, according to their class.

The report of the various observers are carefully collated and examined at the Central Observatory, but it is evident that the Directors cannot assume the full responsibility for the accuracy of these observations. As every meteorologist knows, in observations of this kind much must be left to the conscientious care of the observer. Hence, while we take this opportunity to express our confidence in our observers, we think it proper to subjoin the following list, which gives some particulars about the stations and also the names of the observers who are primarily responsible for the accuracy of the observations in this volume (Part III) of the Annual Report of the Weather Bureau.

SECONDARY STATIONS AND OBSERVERS OF THE WEATHER BUREAU.

Town.	Province.	Island.	North latitude.		East longitude.		Observer.	Class.

REMARKS.

The hours of observations at the first and second class stations are 2 a. m., 6 a. m., 10 a. m., 2 p. m., 6 p. m., 10 p. m.; at the third and fourth class stations, 6 a. m. and 2 p. m. The time used is that of the one hundred and twentieth meridian east of Greenwhich.

The barometer readings are reduced to sea level and 0° C., but no correction has been applied to eliminate the effect of gravity depending on the latitude of the place of observation.

NOTE.—The thermometer-shelter of this station was destroyed during the typhoon of the 24–25.

[a] Beginning with November 24, 10 p. m. the height of the barometer above sea level was 2.4 meters.

[b] Rainfall for this day is omitted as the rain-gauge could not be observed after 6 p. m.

[c] 29 days of observation.

TACLOBAN.

[ϕ=11° 15′ N; λ=125° 00′ E; berometer above sea, 2.4 meters; gravity correction not applied, —1.82 mm.]
